技术规格

Background:	The protein encoded by this gene plays a crucial role in B-cell development. Mutations in this gene cause X-linked agammaglobulinemia type 1, which is an immunodeficiency characterized by the failure to produce mature B lymphocytes, and associated with a failure of Ig heavy chain rearrangement. Alternative splicing results in multiple transcript variants encoding different isoforms.
Applications:	ELISA, IHC
Name of antibody:	BTK

Synonyms:	AT; ATK; BPK; XLA; IMD1; AGMX1; PSCTK1
SwissProt:	Q06187

ELISA Recommended dilution:	5000-10000
IHC positive control:	Human lung cancer and human brain
IHC Recommend dilution:	25-100
