技术规格

Background:	The protein encoded by this gene is involved in the formation of the pre-replication complex that is necessary for DNA replication. The encoded protein can bind geminin, which prevents replication and may function to prevent this protein from initiating replication at inappropriate origins. Phosphorylation of this protein by cyclin A-dependent kinases results in degradation of the protein.
Applications:	ELISA, WB, IHC
Name of antibody:	CDT1
Immunogen:	Synthetic peptide of human CDT1
Full name:	chromatin licensing and DNA replication factor 1
Synonyms:	DUP; RIS2

SwissProt:	Q9H211
ELISA Recommended dilution:	5000-10000
IHC positive control:	Human lung cancer and human liver cancer
IHC Recommend dilution:	30-150
WB Predicted band size:	60 kDa
WB Positive control:	Human fetal brain tissue lysate
WB Recommended dilution:	500-2000
